DETAILED ACTION

The examiner acknowledges the receipt of applicants' after final amendment dated 02/21/2011.

Applicant argues that all rejections are based on Tomio (JP 2004-220931) should be withdrawn since a certified English translation of their priority document on was sent on September 23, 2009. The applicant requests that the Examiner review the certified translation of their priority document. The applicant believes that they are entitled to a filed date of December 5, 2003 which would antedate Tomio (JP 2004-220931). Since all the rejections are based on Tomio (JP 2004-220931), all these rejections should be withdrawn.

The examiner confirms the receipt of the certified translation and the examiner has reviewed the document which does in fact perfect the foreign priority. As such, applicant is entitled to the December 5, 2003 date.

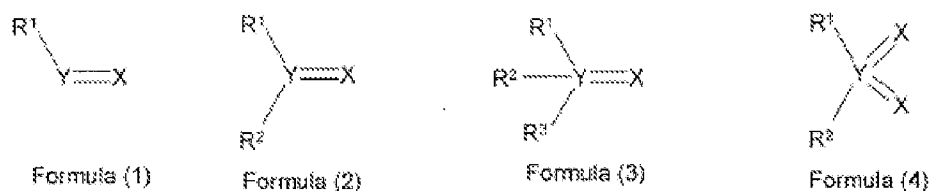

All rejections based on Tomio (JP 2004-220931) are withdrawn and the finality has been withdrawn.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: applicant claims:

Organic electroluminescent device comprising anode, cathode and at least one emission layer comprising at least one matrix material A which is doped with at least one phosphorescent emitter, and at least one hole-blocking layer comprising at least one hole-blocking material B, with the proviso that the matrix material A is not identical with the hole-blocking material B, wherein the hole blocking material B conforms to the formulae (1) to (4) according to scheme 1

Scheme 1

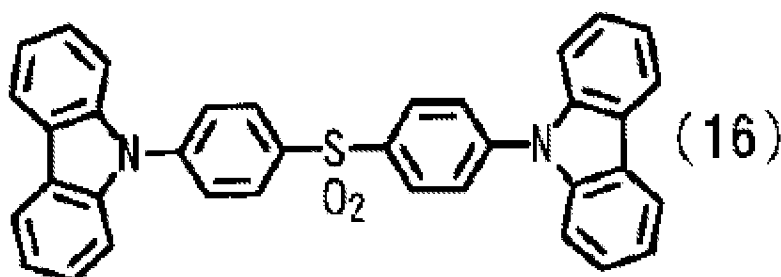

wherein

Y is, identically or differently on each occurrence, C or S in the formula (2) and P in the formulae (1) and (3) and S in the formulae (4);

X is on each occurrence, identically or differently, O or S and in formula (3) is S;

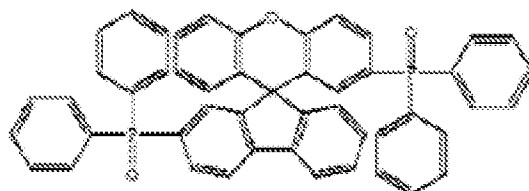

1. A search of the prior art did not show the claimed invention. The closest related art appears to be Tomio who discloses a hole inhibiting (blocking) layer (abstract) composed of Formula 16 (paragraph 47):

As mentioned above, the intervening Tomio reference was eliminated by applicants' perfection of the foreign priority.

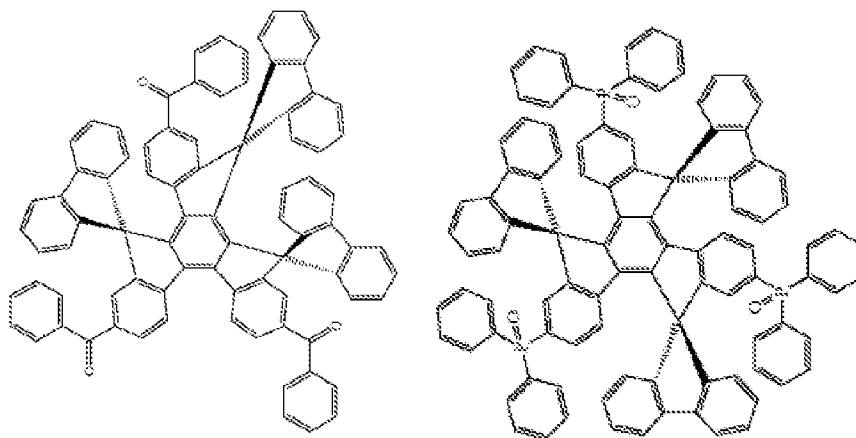

Art Unit: 1786

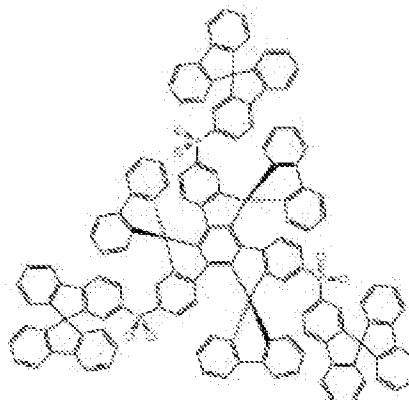

Applicants' previous amendment eliminated hole blocking materials disclosed by Tominaga (US2003/0168970) represented by Formula T-1:

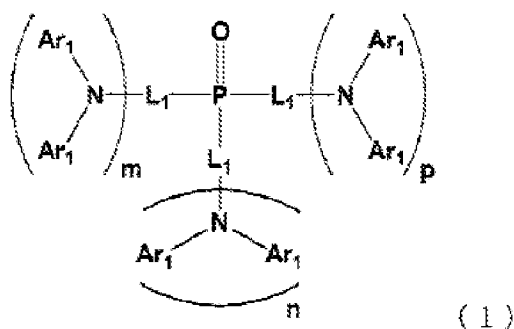

Although not prior art, the examiner also notes the following references as closely related to applicants' invention.

Stoessel (US 7,683,229) discloses materials used as hole blocking materials (column 10, line 2) such as the following (pages 49, 83 and 89) :

Additionally, Kai (WO 2010/098386) discloses hole blocking materials represented by the following material (abstract):

(57) **Abstract:** Disclosed is an organic electroluminescent element (organic EL element) which has a simple structure, improved luminous efficiency and sufficient driving stability. The organic EL element is obtained by laminating a positive electrode, an organic layer containing a phosphorescent layer, and a negative electrode on a substrate, and a phosphine oxide derivative represented by general formula (1) is contained in the phosphorescent layer, an electron transporting layer, a hole blocking layer or an excitation blocking layer. In general formula (1), L₁ represents a direct bond or a monovalent to trivalent aromatic group; and each Ar₁ represents an aromatic group. The two Ar₁s bonded to one same nitrogen atom may form a nitrogen-containing heterocyclic ring, and may further form a fused ring together with the nitrogen-containing heterocyclic ring.

While the electroluminescent art shows that sulfoxides, ketones, and phosphine oxides are commonly used as hole blocking materials, the prior art did not show compounds that anticipate or render the instant invention obvious.

2. Claims 1, 3-22 and 25-28 allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1786

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
